Calculators during exams at SU

> **The only permitted calculators are those provided in the exam rooms**. Modern calculators can have internet access and AI features, so personal calculators are no longer allowed.

The exam rooms provide the *Sagitta scientific calculator*.

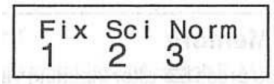

How to change the decimal notation

The Sagitta calculator may use scientific notation by default:

- small numbers such as 0.000032 are shown as 3.2^{-05} or $3.2e$ - 05
- large numbers such as 12000000 are shown as 1.2^{07} or $1.2e + 07$

If you prefer to see these numbers written out in full, do the following:

- Press the **Mode** button in the upper right several times until you see the screen below.

- Press **3** to choose the *Norm* mode.
- Press **2** to choose *Norm 2*. This mode switches to scientific notation only for very small and very large numbers.

How to compute powers of the number e

There are (at least) two ways to enter, for example, e^3:

- **Shift** + **ln**, then **3**
- **Alpha** + **ln**, then ^, then **3**

Both give e^3. A common mistake is to press **Shift** + **ln**, then ^, then **3**. This is the same as typing `e^^3` and gives a *Syntax error*.
